Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the medium containing 100 mg/l of tetracycline. The cell concentration of the *Agrobacterium* suspension was adjusted to 100, 200, 300, 400, 500, 600, 700, 800, 900, and 1000 cells/ml. The cell concentration of the *Agrobacterium* suspension was determined by the optical density of the suspension at 600 nm. The transformation efficiency was determined by the number of transformants per 100 cells. The transformation efficiency was determined by the number of transformants per 100 cells. The transformation efficiency was determined by the number of transformants per 100 cells.

1

10. *Chlorophyll *a** and *Chlorophyll *b** were determined by the method of Lichtenthaler and Whistler (1973).
