

# MULTI-POINT SURFACE USE AND OPERATIONS PLAN

Yates Petroleum Corporation  
Divide Federal JW Com #1  
1980' FSL and 1980' FWL  
Section 4, T17S-R24E  
(Developmental Well)

This plan is submitted with Form 9-331C, Application for Permit to Drill, covering the above described well. The purpose of this plan is to describe the location of the proposed well, the proposed construction activities and operations plan, the magnitude of necessary surface disturbance involved, and the procedures to be followed in rehabilitating the surface after completion of the operations, so that a complete appraisal can be made of the environmental effect associated with the operation.

## 1. EXISTING ROADS.

Exhibit A is a portion of a USGS topographic map showing the wells and roads in the vicinity of the proposed location. The proposed wellsite is located approximately 1.8 miles west of Artesia, New Mexico and the access route to the location is indicated in red and green on Exhibit A.

### DIRECTIONS:

1. Proceed west from Artesia on Highway 83 for a distance of approximately 10.5 miles,
2. Turn north and follow that road for 1.4 miles,
3. Turn west at flagging and continue for approximately 550 feet. This is the access road to the location.

## 2. PLANNED ACCESS ROAD.

- A. The proposed new access will be approximately 550 feet in length from point of origin to the edge of the drilling pad. The road will lie in an east-to-west direction and will pass through a fence near the point of origin. A cattleguard will be installed through the fence.
- B. The new road will be 12 feet in width (driving surface), except at the point of origin, adjacent to the existing road, at which point enough additional width will be provided to allow the trucks and equipment to turn.
