Methodology

The data was collected from a survey of 1000 participants. The survey was conducted online and was available to participants from January 1st to March 31st, 2020.

The survey was designed to collect data on the following variables:

1. Age: The age of the participant in years.

2. Gender: The gender of the participant.

3. Education: The highest level of education completed by the participant.

4. Income: The annual income of the participant in US dollars.

5. Employment: Whether the participant is currently employed.

6. Health: Whether the participant reports any health issues.

7. Stress: Whether the participant reports feeling stressed.

8. Sleep: Whether the participant reports sleeping well.

9. Satisfaction: Whether the participant is satisfied with their life.

The data was analyzed using a series of statistical tests, including t-tests, ANOVAs, and regression analyses.
