

8. ANCILLARY FACILITIES:

A. None required.

9. WELLSITE LAYOUT:

A. Exhibit "D" shows the relative location and dimensions of the well pad, reserve pits, and major rig components. The pad and pit area has been staked and flagged.

B. Mat Size: 270' X 260'.

C. Cut and Fill: The location will require a 1.0 - 1.5 foot cut on the north and northeast and filled to the south and southwest of the pad.

D. The surface will be topped with compacted caliche and the reserve pit will be plastic lined.

10. PLANS FOR RESTORATION OF THE SURFACE:

A. After completion of drilling and/or completion operations all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave the well-site in an aesthetically pleasing a condition as possible.

B. Any unguarded pits containing fluids will be fenced until they are filled.

C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management and the United States Geological Survey and the State of New Mexico (for 600' of the proposed access road) will be complied with and will be accomplished as expeditiously as possible. All Pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION:

A. Topography: The land surface in the vicinity of the wellsite is relatively level with a gentle slope to the southwest from an elevation 3548' at about 100' to the mile.

B. Soil: The topsoil at the wellsite is a limey sandy loam, with outcrops of caliche, gypsum and limestone rock.

C. Flora and Fauna: The vegetative cover consists of very sparse miscellaneous grasses, including Tobosa, Bush Muhly, and Grama, Mesquite and Creosote bushes and cactus and other miscellaneous desert flowers and weeds. The only wildlife observed were lizards, jackrabbits, cottontail rabbits and quail, but it is likely that other typical semi-arid desert wildlife inhabit the area, which is used for cattle grazing.

D. Ponds and Streams: There are no rivers, streams, lakes or natural ponds in the area, however there is a pond (tank) at the Dog Canyon wellsite windmill as shown on Exhibit "B".
