

D. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE.

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk.
- B. Unguarded pits, if any, containing fluids will be fenced until they have been filled.
- C. This location being on Federal land, cleanup operations will be made in accordance with Fed. regulation. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION.

- A. Topography: The wellsite is in an area of gentle rolling eminences separated by playas on an undulating plain.
- B. The topsoil at the wellsite is composed of silty clay loams and silt loams.
- C. The vegetation cover at the wellsite consists primarily of prairie grass, choya, mesquite, yucca, and miscellaneous weeds. No wildlife was observed, but it is likely that typical semi-arid desert wildlife, such as rabbits, coyotes, gophers, rodents and snakes inhabit the area. The area is used for cattle grazing.
- D. There are no stock ponds, lakes, streams or rivers within several miles of the wellsite.
- E. No occupied dwellings in the immediate vicinity.
- F. The wellsite is located on Federally owned surface as is the proposed access road.
- G. There is a windmill approximately 3960' to the NE of the proposed wellsite.

12. OPERATORS REPRESENTATIVE.

- A. The field representative for assuring compliance with the approved surface use plan are
