Read & Stevens proposes to plug and abandon the subject well. Drilled as a Grayburg San Andres test the well was TD @ 4,070' with 7" csg set from surface to TD. TOC by bond log is 1,800'. The 9 5/8" surface csg was set @ 1,085' and cemented to surface. Read & Stevens proposes to abandon the subject well by placing a CIBP 30' above the existing perforations of 3,862'-3,880', and dumping 35' of cmt on top. The 7" csg will then be cut and pulled from the TOC @ 1,800' and a 100' cmt plug set half in and half out of the csg stub. A surface csg shoe plug will then be set half in and half out from 1,135' to 1,035'. Another 100' plug set from 350'-450', and a 5" surface plug. The wellhead will be cut off and a dry hole marker set.
