

9. WELLSITE LAYOUT.

- A. Exhibit C shows the relative location and dimensions of the well pad, reserve pits and major rig components.
- B. The ground surface at the wellsite is an area of a gentle inclination. The pad will be covered with a least 6 inches of compacted caliche.
- C. The reserve pits will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE.

- A. After finishing drilling and/or completion operation, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk.
- B. Unguarded pits, if any, containing fluids will be fenced until they have been filled.
- C. This location is on Federal land. All pits will be filled and leveled within 90 days after abandonment. Cleanup operations will be made in accordance with Federal regulations.

11. OTHER INFORMATION.

- A. Topography: The wellsite is in an area of low rolling eminences separated by playas on an undulating plain.
- B. The topsoil at the wellsite is of silty clay loamsand and silt loams.
- C. The vegetation cover at the wellsite consists primarily of prairie grass, mesquite, choya, yucca, and miscellaneous weeds. No wildlife was observed, but it is likely that typical semi-arid desert wildlife, such as rabbits, coyotes, gophers, rodents and snakes inhabit the area. The area is used for cattle grazing.
- D. There are no stock ponds, lakes, streams or rivers within several miles of the wellsite.
- E. There are no occupied dwellings in the immediate vicinity.
- F. The wellsite is located on Federally owned surface as the proposed access road
- G. There is a windmill approximately 1 1/2 miles to the NE of the proposed wellsite.
