CONTRACTOR'S OPTION TO FURNISH:

- 1. All equipment and connections above bradenhead or casinghead. Working pressure of prevenuers to be 3,000 pel, MINISTRATION.
- 2. Automatic accumulator (80 gallen, minimum) capable of closing BOP in 30 seconds or isse and, holding them closed apainst full raied working procesure.
- 3.80P controls, to be located near drillers position.
- 4. Kelly equipped with Kelly cock.
- 5. inside blowout prevventer er its equivalent on derrick floor at all times with proper threads to fit pipe being used.
- 6. Kelly saver-sub equipped with rubber casing protector at all times.
- 7. Plug type bloweut prevenuer tester. S.Extra set pipe rame to ill drill pipe in use on location at all times.
- 8. Type RX rang gealets in place of Type R.

MEC TO FURNISH:

- 1.Bradenhead or casinghead and side
- 2. Weer bushing, if required.

GENERAL NOTES:

- 1. Deviations from this drawing may be made only with the express permission of MEC's Drilling Manager.
- 2.All connections, voives, Strings, piping, OC., Subject to well or pump pressure must be fanged (suitable clemp connections acceptable) and have minimum werking pressure equal to raise werking processes of proveniers up through the "e. Valves must be full spening and suitable ter high pressure must service.
- 3. Centrois to be of standard design and each marked, showing opening and claspub posture.
- 4.Chesses will be positioned so as not to hamper or delay changing at chake beans. Replaceable parts for adjustable Chaire, Other bean sizes, relainers, and Chains arenates to be assistantly located for invadiate use.
- S.All valves to be equipped with handwhosis or handles ready for immediate wee.
- 6. Chake lines must be suitably anchored.

- 7. Hendwheels and extensions to be connected and ready for use
- 8. Velves adjacent to drilling apool to be kept apan. Use autaide valves except for emergency.
- S.Ali seemiese steel control piping (3000 pai working pressure) to have Rezible joints to avoid stress. Picage will be permitted.
- 18.Coampheed connections shall not be treed except in case of emergency.
- 11.Do not use kill line for routine fill-up coorsions

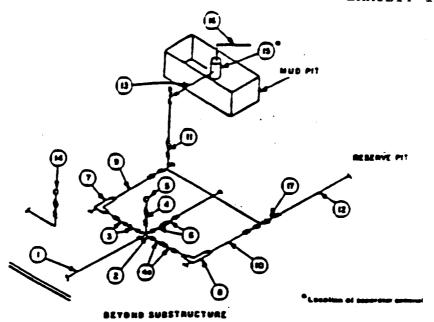

Attachment to Exhibit #1 NOTES REGARDING BLOWOUT PREVENTORS

Devon Energy Corporation (Nevada)
Eagle "33N" Federal #10
230' FSL & 2140' FWL
Section N-33-T18S-R27E
Eddy County, New Mexico

- 1. Drilling nipple will be constructed so it can be removed mechanically without the aid of a welder. The minimum internal diameter will equal BOP bore.
- 2. Wear ring will be properly installed in head.
- 3. Blowout preventor and all associated fittings will be in operable condition to withstand a minimum 3000 psi working pressure.
- 4. All fittings will be flanged.
- 5. A full bore safety valve tested to a minimum 3000 psi WP with proper thread connections will be available on the rotary rig floor at all times.
- 6. All choke lines will be anchored to prevent movement.
- 7. All BOP equipment will be equal to or larger in bore than the internal diameter of the last casing string.
- 8. Will maintain a kelly cock attached to the kelly.
- 9. Hand wheels and wrenches will be properly installed and tested for safe operation.
- 10. Hydraulic floor control for blowout preventor will be located as near in proximity to driller's controls as possible.
- 11. All BOP equipment will meet API standards and include a minimum 40 gallon accumulator having two independent means of power to initiate closing operation.

- (1) City one required in Class 3M.
- (2) Gass valvas-anily shall be used for Closs 1844.
- (3) Remote asserted hydroutic states required on 5,000 pel and 10,000 pel for drilling.

EQUIPMENT SPECIFICATIONS AND INSTALLATION INSTRUCTIONS

- 1. All connections in choice manifold shall be wolded, studded, Ranged or Cameron clamp of comparable rating
- 2. All fampes shall be API 68 or 68X and ring passets shall be API RX or 8X. Use only 8X for 10 MWP. 3. All times shall be securely enchared.
- 4. Choices shall be equipped with tungsten carbide seats and needles, and replacements shall be evaliable.
- 5. Choice manifeld pressure and examples pressure gauges shall be available at the choice manifold to exact in regulating chases. As an attended with automatic chases, a choice manifeld pressure gauge shall be incomed on the rig hoor in con-
- 6. Line from drilling speci to choke manifeld enoutd be an straight as passible. Lines downstream from chokes shall make turns by large bends or 90° bends using buil plugged tees.
- 7. Discharge lines from chakes, chake bypeas and from top of ges separator should vent as for as practical from the well
