UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

APPLICATION FOR PERMIT TO DRILL OR REENTER

1a. Type of Work: ☒ DRILL

☐ REENTER

1b. Type of Well: ☐ Oil Well ☒ Gas Well ☐ Other

☐ Single Zone ☐ Multiple Zone

2. Name of Operator

Southwestern Energy Production Company

3a. Address **Houston, TX 77032**

3b. Phone No. (include area code)

2350 N. Sam Houston Pkwy. East, Ste 300 (281) 618-4733

4. Location of Well (Report location clearly and in accordance with any State requirements.)*

At surface **1500' FNL, 1980' FEL of Sec. 25**

At proposed prod. zone

Unit G

14. Distance in miles and direction from nearest town or post office*

5. Lease Serial No.

NM-12764

6. If Indian, Allottee or Tribe Name

7. If Unit or CA Agreement, Name and No.

287867

8. Lease Name and Well No.

Lonesome Dove "25" Federal #1

9. API Well No.

38-015-31698

10. Field and Pool, or Exploratory

Exploratory WC/MORROW

11. Sec., T., R., M., or Blk. and Survey or Area

Sec. 25, T16S-R29E

12. County or Parish

Eddy

13. State

NM

15. Distance from proposed*
location to nearest
property or lease line, ft.
(Also to nearest drig. unit line, if any)

660'

16. No. of Acres in lease

320

17. Spacing Unit dedicated to this well

320

18. Distance from proposed location*
to nearest well, drilling, completed,
applied for, on this lease, ft.

19. Proposed Depth

11,000'

20. BLM/BIA Bond No. on file

ES0051

21. Elevations (Show whether DF, KDB, RT, GL, etc.)

3,714' GL

22. Approximate date work will start*

03/20/01

23. Estimated duration

40 days

24. Attachments

The following, completed in accordance with the requirements of Onshore Oil and Gas Order No.1, shall be attached to this form:

1. Well plat certified by a registered surveyor.
2. A Drilling Plan.
3. A Surface Use Plan (if the location is on National Forest System Lands, the SUPO shall be filed with the appropriate Forest Service Office).

4. Bond to cover the operations unless covered by an existing bond on file (see Item 20 above).
5. Operator certification.
6. Such other site specific information and/or plans as may be required by the authorized officer.

25. Signature

This topographic map depicts a portion of the Texas Panhandle, centered on the intersection of County Road 215 and an existing Caliche Road. The map includes the following features:

- Proposed Access Roads:**
 - A 2575 LF. OF ACCESS ROAD ALONG FENCE, shown as a dashed line extending from the intersection towards the northeast.
 - A 930 LF. OF ACCESS ROAD, shown as a dashed line extending from the intersection towards the east.
- Existing Features:**
 - EXISTING CALICHE ROAD:** A solid line running horizontally across the middle of the map.
 - COUNTY ROAD 215:** A solid line running vertically through the center of the map.
 - Double Wells Tank:** Located in the lower-left quadrant.
 - LONESOME DOVE "25" FED. #1:** A point of interest located just east of the intersection of County Road 215 and the Caliche Road.
- Topography and Landmarks:**
 - Oil Well (Dry):** Located in the upper-left corner.
 - Oil Well:** Located in the lower-left corner.
 - BM 3742:** A benchmark located in the upper-right quadrant.
 - BM 3731:** A benchmark located in the middle-right quadrant.
 - Contour Lines:** Various contour lines are shown, with elevations such as 3680, 3690, 3700, 3710, 3720, 3730, 3740, and 3750.
 - Section Numbers:** The map is divided into sections numbered 19, 23, 24, 25, 26, 30, 31, 35, and 36.

Drilling, Drill Stem Tests, Casing and Cementing Program

1. Drill 17-1/2" hole to $\pm 450'$.
2. Cement 13-3/8", 54.5#, J-55 casing with 450 sx 15:85 Poz:Class C + 0.25 pps D29 + 2% S1 + 2% D20. Run Texas Pattern Guide Shoe, with an insert float valve in top of shoe joint.
3. Nipple up and install BOP's. Test casing to 600 psi after 18 hours and drill out cement.
4. Drill 12-1/4" hole to 3,200'. Anticipated lost circulation zone at 2,740' with possibility of dry drilling.
5. Cement 8 – 5/8", 32#, J-55 casing with lead, 1400 sx 35:65 Poz:Class C + 6% D20 + 0.25 pps D29. Tail with 250 sx Class C + 2% S1 + 0.25 pps D29. Run guide shoe and insert float on bottom joint, and 3-6 centralizers. Weld first few joints of casing.
6. Nipple up and install BOP's. Test casing to 1500 psi for 30 minutes after WOC 18 hours and drill out cement after 24 hours.
7. Drill 7-7/8" hole to TD at 11,000'. A fresh water mud system will be used to 9,800'. At that point the system will be mudded up to 9.3 – 9.6 ppg to obtain good samples. See attached Mud Program for details. Pit levelers and flowline sensors will be utilized on the pits. Drill stem tests are possible in the following zones: Cisco-Canyon – 8,800'; Atoka – 10,240'; Morrow – 10,750'. DST flow periods and shut-in time will be determined on location. A mud logging unit will be on location at 1,100' to assist in evaluating samples and shows for exact drill stem test intervals. Run Formation Density-Compensated Neutron – Gamma Ray log, Dual Induction-Log, and Dipole Sonic Log.
8. Run 5-1/2", 17#, N-80 casing and cement with 1900 sx 50:50 Poz:Class H + 6% D44 + 2% D20 + 0.4% D59. Use guide shoe and float collar, and 12-15 centralizers where necessary. Use top and bottom rubber plugs, displace cement with clean, fresh water treated with 2% KCL.
9. Perforations, acid job, and additional stimulation to be determined after completion.

EXHIBIT G

**Southwestern Energy Production Company
Lonesome Dove "25" Federal #1
1500' FNL & 1980' FEL
Sec. 25, T16S-R29E**

- Surface: Spud with a conventional gel/lime "spud mud". Utilize native solids to maintain sufficient viscosity to clean the hole. Mix paper as needed to control seepage loss. Severe loss may require dry drilling to casing point.
- Intermediate: Drill out below surface casing with brine. Circulate through the inside portion of the reserve pit for maximum gravitational solids removal. Use sweeps of paper as needed to control seepage loss and for additional hole cleaning. Maintain pH using lime.
- Production: Drill out below intermediate casing with fresh water. Circulate through the remaining portion of the reserve pit for gravitational solids removal. Continue to maintain pH using lime and paper sweeps to control seepage loss and prevent excessive cuttings build-up.

At the top of the Wolfcamp, around 7,700', displace the hole with brine and use additions of fresh water to adjust weight as hole conditions dictate. (Wells in this vicinity have used mud weights from 8.9 – 9.7 ppg down to 11,000'.)

Confine circulation to the steel pits. Discontinue lime and begin using caustic soda to maintain pH. Mix XCD Polymer for viscosity and Starlose for filtration control. Add Xcide-102 to the system to preserve the XCD Polymer. Small quantities of S-10 (defoamer) may be needed while mixing through the hopper. Begin at mud-up with a filtrate of 10-12 cc and lower to 6-8 cc prior to penetrating the Morrow

Statement Accepting Responsibility for Operations

Operator Name: Southwestern Energy Production Company
Street or Box : 2350 North Sam Houston Parkway East, Suite 300
City, State : Houston, TX
Zip Code : 77032

The undersigned accepts all applicable terms, conditions, stipulations, and restrictions concerning operations conducted on the leased land or portion thereof, as described below:

Lease No.: NM-12764

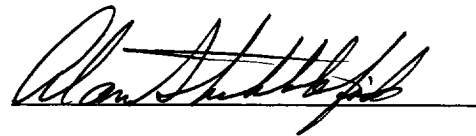

Legal Description of land: Sec. 25, T16S-R29E

Formation(s) (if applicable): Mississippian

Bond Coverage: \$150,000 Nationwide Surety Bond, individually bonded.

BLM Bond File No.: ES0051

Authorized Signature:

Title: Drilling & Exploitation Manager

Date: January 31, 2001

SURFACE USE PLAN

Southwestern Energy Production Company Lonesome Dove "25" Federal #1 1500' FNL & 1980' FEL Sec. 25, T16S-R29E

1. EXISTING ROADS – Area map, Exhibit "A", is a reproduction of the U.S.G.S. New Mexico 15 minute quadrangle. Existing and proposed roads are shown on the exhibit. All roads shall be maintained in a condition equal that which existed prior to the start of construction.
 - A. Exhibit "A" shows the proposed development well site as staked.
 - B. From Loco Hills, go west on Hwy 82 for 3.3 miles to the intersection of Hwy 82 with County Road 215. Turn right on County Road 215 and go north for 5.2 miles to an intersection with a 2-trail road. Turn right and go east - northeast for 0.6 miles. At this point you will be approximately 1300 feet north of the Lonesome Dove location flag.
2. PLANNED ACCESS ROADS – Approximately 980' of new access road will be constructed.
 - A. The access road will be crowned and ditched to a 12'-00" wide travel surface with a 40' right-of-way.
 - B. Gradient on all roads will be less than 5.00%.
 - C. No turnouts will be necessary.
 - D. If needed, road will be surfaced with a minimum of 4" of caliche. This material will be obtained from a local source.
 - E. Centerline for the new access road has been flagged. Earthwork will be a required by field conditions.
 - F. Culverts in the access road will not be used. The road will be constructed to utilize low water crossings for drainage as required by the topography.
3. LOCATION OF EXISTING WELLS IN A ONE-MILE RADIUS
 - A. Water wells -- None known.
 - B. Disposal wells -- None known.
 - C. Drilling wells -- None known.
 - D. Producing wells -- As shown on Exhibit "C"

E. Abandoned wells -- As shown on Exhibit "C"

4. If, upon completion, the well is a producer, Southwestern Energy Production Company, will furnish maps or plats showing On Well Pad facilities and Off Well Pad facilities (if needed) on a Sundry Notice before construction of these facilities starts.

5. LOCATION AND TYPE OF WATER SUPPLY

Water will be purchased locally from a private source and trucked over the access roads or piped in flexible lines laid on top of the ground.

6. SOURCE OF CONSTRUCTION MATERIALS

If needed, construction materials will be obtained from the drill site's excavations or from a local source. These materials will be transported over the access route as shown on Exhibit "A".

7. METHODS FOR HANDLING WASTE DISPOSAL

A. 1. Drill cuttings will be disposed of in the reserve pit.

2. Trash, waste paper, and garbage will either be contained in a fenced trash trailer or in a trash pit, fenced with mesh wire to prevent wind-scattering during storage. When the rig moves out, all trash and debris left at the site will be contained to prevent scattering and will be buried at least 36" deep within a reasonable period of time.

3. Salts remaining after completion of the well will be picked up by the supplier, including broken sacks.

4. Sewage from the trailer houses will drain into holes with minimum depth of 10' 00". These holes will be covered during drilling and backfilled upon completion. A "porta John" will be provided for the rig crews. This will be properly maintained during the drilling operations and removed upon completion of the well.

5. Chemicals remaining after completion of the well will be stored in the manufacturer's containers and picked up by the supplier.

B. Remaining drilling fluids will be allowed to evaporate in the reserve pit until the pit is dry enough for backfilling. In the event drilling fluids will not evaporate in a reasonable period of time, they will be transported by tank truck to a State approved disposal site.

Water produced during testing of the well will be disposed of in the reserve pit. Oil produced during testing of the well will be stored in test tanks until sold and hauled from the site.

8. ANCILLARY FACILITIES

No camps or airstrips will be constructed.

9. WELL SITE LAYOUT

- A. Exhibit "B" (Scale 1" = 50') shows the proposed well site layout.
- B. This exhibit indicates proposed location of reserve and trash pits and living facilities.
- C. Mud pits in the active circulating system will be steel pits and the reserve pit is proposed to be unlined, unless subsurface condition encountered during pit construction indicate that lining is needed for lateral containment of fluids.
- D. If needed, the reserve pit is to be lined with PVC or polyethylene liner. The pit liner will be 6 mils thick. Pit liner will extend a minimum, 2'-00" over the reserve pits dikes where the liner will be anchored down.
- E. The reserve pit will be fenced on three sides with four strands of barbed wire during drilling and completion phases. The fourth side will be fenced after all drilling operations have ceased. If the well is a producer, the reserve pit fence will be torn down. The reserve pit and those areas of the location not essential to production facilities will be reclaimed and seeded per BLM requirements.

10. PLANS FOR RESTORATION OF SURFACE.

Rehabilitation of the location and reserve pit will start in a timely manner after all drilling operations cease. The type of reclamation will depend on whether the well is a producer or a dry hole.

However, in either event, the reserve pit will be allowed to dry properly, and fluid removed and disposed of in accordance with Article 7.B as previously noted. The pit area will then be leveled and contoured to conform to the original and surrounding area. Drainage systems, if any, will be reshaped to the original configuration with provisions made to alleviate erosion. These may need to be modified in certain circumstances to prevent inundation of the location's pad and surface facilities. After the area has been shaped and contoured, topsoil from the spoil pile will be placed over the disturbed area to the extent possible. Revegetation procedures will comply with BLM standards.

If the well is a dry hole, the pad and road area will be recontoured to match the existing terrain. Topsoil will be spread to the extent possible. Revegetation will comply with BLM standards.

Should the well be a producer, the previously noted procedures will apply to those areas, which are not required for production facilities.

11. OTHER INFORMATION

- A. The topography is of a rolling terrain with vegetation of sagebrush and native grass. The soils are clayey sand over caliche base.
- B. The surface is used to mainly access producing wells in the area and minimal grazing for livestock. It is administered by the BLM and is being leased to William Jarvis Groble, P. O. Drawer G, Jal, NM 88252.
- C. An archeological study is being conducted for the location and new access road. The report will be submitted separately when completed.
- D. There is no building of any kind in the area.

12. OPERATOR'S REPRESENTATIVE – Field representatives for contact regarding compliance with the Surface Use Plan are:

Before and during construction:

Dale Stafford
R. K. Ford & Associates
201 West Wall, Suite 600
Midland, TX 79701
(915) 682-0440

After construction:

Bruce Drummond
Diamond "M" Production Company
4459 S. FM 1606
Snyder, TX 79549
(915) 573-0725

13. CERTIFICATION – I hereby certify that I, or persons under my direct supervision, have inspected the proposed drill site and access route; that I am familiar with the conditions which currently exist; that the statements made in this plan are to the best of my knowledge, true and correct; and that the work associated with the operations proposed herein will be performed by Southwestern Energy Production Company and its contractors/subcontractors in conformity with this plan and the terms and conditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.
