

- E. If the well is deemed commercially productive, the reserve pit will be restored as described in 10 (A) within 120 days subsequent to the completion date. Caliche from areas of the pad site not required for operations will be reclaimed. The original top soil will be returned to the area of the drill pad not necessary to operate the well. These unused areas of the drill pad will be contoured, as close as possible, to match the original topography.

11. Surface Ownership:

The well site is owned by the Bureau of Land Management.

12. Other Information:

- A. The project is located on the northwest side a prominent rise with vegetations consisting of gyp coldenia, grasses, creosote and cholla cacti. Tabular siltstone-limestone outcrops occur on east side of pad. 2% slope shallow sandy clay soils over gypsum.
- B. There is permanent water (Pecos River) 0.8 miles W/SW of the location.
- C. A Cultural Resources Examination has been completed by Southern New Mexico Archeological Services, Inc. and forwarded to the Carlsbad, New Mexico BLM office.
