THEORY OF THE EARTH

CHAPTER I. OF THE ORIGIN OF THE EARTH.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity. It is, in fact, a flattened spheroid, the diameter of which at the poles is less than that at the equator.

The diameter of the Earth at the poles is 7926 miles.

The diameter of the Earth at the equator is 7926 miles.

The circumference of the Earth at the poles is 25120 miles.

The circumference of the Earth at the equator is 25120 miles.

The surface of the Earth is divided into four parts, called continents, by the great oceans, which surround it.

The four continents are Asia, Europe, Africa, and America.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.

THE EARTH, as we see it, is a globe, or sphere, of a very imperfect sphericity.
