(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Artesia, New Mexico June 26, 1955

Well No. 2 is located 660 ft. from N line and 660 ft. from W line of sec. 10  
17S 17E 17N  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Undesignated Sady New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3900 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a depth of 3900 ft or a lesser depth if production is encountered, and is to be drilled with rotary. It is our intention to use air. Our casing plan is unknown at this time, as we plan to go deep as possible, using air until water is encountered. When water has been encountered, your office will be contacted and a casing plan worked out to meet your requirements.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
