The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a depth of 3500 feet or a lesser depth if production is encountered, however it is our intention to test the Nator and Prater section. Will set approximately 400 feet of 7" OD 20# 255 casing as surface casing, cementing with 20 grade cement. The Oil String will be 4 1/2" OD 9.50# 255, will cement with sufficient amount of cement to circulate to surface. The Well will be drilled with rotary.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
