DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Original open hole completion was made in Frontier Sand, which tested 6 G.C.F. natural, after being fractured sand oil was recovered and the well started cycling intermittently. Water sand perforated and fraced w/15,000 gal. oil & 15,000 gal. sand at 2300-75. Plug was set in cas. above Frontier at 2400'. The water will be produced until it ceases to flow (estimate 3 to 6 months) at that time plug will be drilled out and the Frontier and water will be pumped together (same tank)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
