DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with cable tools to approximately 2480' and complete in the Premier San. We propose to set 8 $5/8^{\mu}$ surface casing at approximately 375' cementing to surface. We propose to set 5 $1/2^{\mu}$ casing to T.D., acidize and sand oil frac during completion if necessary to stimulate production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
