The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was drilled to a depth of 925 feet on October 3, 1969. I have completed a log for approximately 925 feet, and the production log shows 1 to 15 barrels per day, or 100 to 1500 cubic feet per day. The cost of pulling this well will be approximately \$1000.00. The well is to be abandoned.

The total depth is 925 feet. The casing is 2 1/2 inch diameter, with 15 sacks of cement approximately 1100 lbs. The casing is set on the base of the well at approximately 925 feet, and a string of 15 sacks of cement is set at the base of the well at approximately 925 feet. The casing is set on the base of the well at approximately 925 feet, and a string of 15 sacks of cement is set at the base of the well at approximately 925 feet. The casing is set on the base of the well at approximately 925 feet, and a string of 15 sacks of cement is set at the base of the well at approximately 925 feet.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
