DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with a rotary rig to test the Queen Sand at approximately 1600'. We plan to set 7" 20# seamless casing at 350' and cement w/25 sacks in a 8 3/4" hole, then to drill ahead in a 6 1/4" hole to total depth. We anticipate coring approximately 60' in the Seven Rivers formation from 880' to 940' and in the Queen Sand at 1600'. Completion plans will depend upon geological findings.
