

JUSTIFICATION:

Dodd A-#5 was completed 3-31-37 at a T. P. of 2757'. The well was shut with both solidified and liquid on subsequent remedial work, and acidized with 1000 gals. A test in the latter part of April, 1938 showing 1/2 barrel of oil per day, and is now temporarily abandoned. On April 23, 1938 an attempt was made to clean out. Junk was encountered at 2612', and the hole could not be cleaned out deeper than that point.

There appears to be no possibility of recompleting this well, we therefore, recommend to pull pipe and abandon this well.
