..... **November 15**, 19 **51**

Well No. **5** is located **660** ft. from **[N]** line and **660** ft. from **[E]** line of sec. **22**

17S (1/4 Sec. and Sec. No.) **29E** (Twp.) **N.M.P.M.** (Range)
Grayburg-Jackson (Field) **Eddy** (County or Subdivision) **New Mexico** (State or Territory)

The elevation of the derrick floor above sea level is **3543** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In April 1950 the above well produced 30 bbls. of oil but in the latter part of that month the production showed it dropped 1/2 bbl. per day. Cable tools were moved in and in cleaning out we encountered what appeared to be junk in the hole which we were unable to fish out or drill by. The well was put back on the pump May 7, 1948 and after pumping some flush production decreased to 1/2 bbl. oil per day

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
