600 Metro Building  
Midland, Texas 79703

Ray,

What we normally do to set up a job of this nature is to run a noise log or Sonan log which is what we call a noise log.

The Sonan determines the location of the water flow or flows, also when well is shut in determines if you have a crossflow.

- (1) Run Sonan Log
- (2) Find top of cement in well (ACBL/VDL).

GEP/pc

A handwritten signature in cursive script, reading "J.E. Pachman".
