## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On October 5, 1961 we perforated 5 1/2" liner from 3055' - 3063' and 3072' - 3082' w/4 Jets/ft.

We then ran straddle packer and acidized w/500 gallons 20% HCl. All acid in on vacuum.

After mudding acid water well flowed 30 BOPD.

Due to low injection pressure it was decided to defer proposed fracture treatment.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
