Figure 1. The effect of the concentration of the *Agaricus bisporus* spores on the growth of *Agaricus bisporus* on the substrate.

Figure 1 is a line graph showing the percentage of total catch versus the number of hauls for various fish species. The x-axis is labeled 'Number of hauls' and ranges from 0 to 10. The y-axis is labeled 'Percentage of total catch' and ranges from 0 to 100. There are 20 data series, each represented by a different line style and marker. The series are numbered 1 through 20. The graph shows that for most species, the percentage of total catch increases rapidly in the first few hauls and then levels off. Species 1 and 2 show the highest catches, reaching nearly 100% in the first few hauls. Species 3 through 20 show lower catches, generally increasing with the number of hauls but remaining below 50%.
