DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We squeezed off perforations from 6282' to 6291' with temporary blocking material, pulled tubing and perforated 5 1/2" casing from 6224' to 6230' and 6236' to 6242' w/4 jets/ft. We then ran 2" EUE tubing with straddle packer from 6203' to 6253', ran sub 3 times well kicked off and flowed 125 BW and 65 BW in 24 hours thru 12/64" tubing choke.

In view of the above results operator does not propose to acidize at the present time.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
