(State or Territory)

The elevation of the derrick floor above sea level is 3593 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On April 9, 1959, we ran 343' (9 Jts.) of 8 5/8" OD Std third mixed 24/ JS and 24/ RS used casing to 349' and cemented with 50 sacks neat cement and 2 sacks salt.

After standing cemented for 72 hours we drilled plug, bailed hole dry and re-ran bailer. As water shut-off tested OK, drilling was resumed.

While drilling at 445', water broke in.

We recomputed with 125 sack and 100 sacks and let stand 72 hours. After drilling plug, water shut-off proved complete.

Cementing was done by Denton Oil Well Cementing Company.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company GENERAL AMERICAN OIL COMPANY OF TEXAS
