☐ Beginning Drilling Operations ☒ Remedial Work  
☐ Plugging ☐ Other                     

Detailed account of work done, nature and quantity of materials used and results obtained.  
Pulled tubing and packer. Attempted to retrieve BP from 6217. Discovered BP was leaking. Could not retrieve BP. Unlatched from BP; set cast iron wire line plug @6206. Ran tubing and packer. Set packer @6120 with bottom of tail pipe @6150. Swabbed well down until only a few gallons of fluid could be recovered by running swab each hour. Fluid was mostly oil with a small amount of water. Washed perms 6178-83 with 500 gals break down acid. Swabbed dry. Treated w/2500 gals regular 15% acid using 2 rubber balls behind each 500 gals. Ran swab 4 times - well commenced flowing. Well is now producing 55-60 bbls oil per day flowing on intermitter. We are still testing the well to determine the most favorable cycle.
