DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We intend to drill this well deeper to approximately 3000' in the San Andres formation. Old total depth is 2770', 7" casing at 2232'.

At total depth we will run Gamma Ray-Muontron log and Caliper survey, run 5 1/2" 14.7 new seamless liner from 2200' to total depth, perforate and Sand-oil fracture any new zones of production in the San Andres formation and also perforate and Sand-oil fracture the present producing zone in the Premier sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
