(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location to a depth of approximately 2950 feet to test the Lovington sand of the San Andres section.

We will run approximately 550 feet of 8 5/8" surface casing and cement with 50 sacks. We expect to run approximately 2150 feet of 7" casing as a water string, pulling same when the oil string is run. We will run an oil string of 5 1/2" or 4 1/2", cementing with 100 or 125 sacks of cement, perforate the sections as determined by the electric log and complete well.

I understan	d that this plan of work must receive approval in writing by the	Geological Survey before operations may be commenced.

## INSTRUCTIONS FOR COMPLETION OF FORM C-128

- 1. Operator shall furnish and certify to the information called for in Section A.
- 2. Operator shall outline the dedicated acreage for both oil and gas wells on the plat in Section B.
- 3. A registered professional engineer or land surveyor registered in the State of New Mexico or approved by the Commission shall show on the plat the location of the well and certify this information in the space provided.
- 4. All distances shown on the plat must be from the outer boundaries of the Section.
- 5. If additional space is needed for listing owners and their respective interests as required in question 3 of Section A, please use space below.
