DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The total depth is 2726'. I plan to mud to bottom of casing, setting 15 sacks of cement approximately 27-5', setting a cement plug at the base of the salt at approximately 970', setting a cement plug at the base of the 10" pipe or around 546', then putting up customary dry hole marker. There is approximately 2345' of 7" and 546' of 10" casing in the hole, the available part of which will be pulled.

The well is making approximately 2 barrels per day.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
