(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.) \*

This well underwent unsuccessful remedial work to repair 7" casing that would not hold induced pressure from the surface. The result was a junked hole with top of 2-3/8" tubing at 2581'. Our proposal to P&A was approved 3/17/86. The P&A was performed as follows:

5/5 to 5/6/86 Established pump rate down tubing (all cement plugs pumped through tbg.) with packer at 2529' of 2½ BPM @ 1000 psi. Set 7" cement retainer @ 2529'. Loaded hole with 9# gelled water. Cemented 2529' to TD (3522') with 225 sks Cl. C, 2% CaCl<sub>2</sub>. Spotted 100' plug in 7" from 2529' to 2429'.

5/7/86 Perforated 2 holes in 7" casing @ 1300'. Set 7" cement retainer @ 1172'. Pressured up to 1000 psi, could not break circulation or pump into formation. Spotted 100' cement plug from 1172' to 1072'. Perforated 2 holes in 7" csg. at 485'. Set 7" cement retainer @ 380'.

5/8/86 Cemented with 125 sks Cl. C, 2% CaCl<sub>2</sub>. Displaced to retainer. Spotted 100' cmt. plug from 380' to 280'.

5/9/86 Perforated 2 holes in 7" csg. at 200'. Set packer at 158'. Cemented with 300 sks Cl. C neat. Had circulation between 7" and 12" csg. No cement to surface.

(Continued)

18. I hereby certify that the foregoing is true and correct
