Well No. Jackson 15-A is located 1760 ft. from EXX line and 1980 ft. from EXX line of sec. 12

SW/4 SE/4 12 17 S 30 E MEPM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Grayburg Jackson Eddy New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We desire approval to drill Jackson 15-A to approximately 3500 feet, hoping to encounter lime pay producing to the south. If we do, we propose to set oil string on top of lime pay; acidize and perhaps frac; then set bridging plug between pay and any upper sand pay expected to be found at about 3050 feet; perforate and frac that pay; knock out bridging plug and put well on production. 8-5/8" will be run to the top of the salt estimated at about 500 feet and cemented to surface.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
