(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

The following work was completed June 16 - 19, 1981:

1. Tagged bottom @ 3150' and spotted 125 sack plug to cover open hole section 3150'-2497'. Tagged top of plug @ 2447'.
2. Ran casing stretch survey — no casing free.
3. Perforated 4 holes @ 875' (Base of Salt) and squeeze 55 sacks cement. Top of plug in casing, 825'.
4. Top of Salt is behind pipe and cement. Water zone was also recorded as being behind pipe and cement. However, when the cellar was dug out, a hole was found around the 8-5/8" casing. It was decided to perforate 4 holes at 293' (water zone) and squeeze cement. 175 sacks cement was squeezed through these perforations. Cement circulated to the surface around the outside of the 8-5/8" and between the 8-5/8" and 7".
5. Cement around the 8-5/8" casing dropped 6' overnight. The cellar was filled with cement when the 10 sack surface plug was set.
6. Permanent dry hole marker was installed.

An additional report will be submitted when the location is cleaned up at the end of the 4 well abandonment program.

18. I hereby certify that the foregoing is true and correct
