Well No. 1-2-2 is located 1650 ft. from XX line and 330 ft. from XX line of sec. 21
NW 1/4 Sec. 21 17 S. 30 E. N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Loce Hills Abo Eddy New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3415 ft.

DETAILS OF WORK

U. S. GEOLOGICAL SURVEY

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casing, pipe, rods, and other equipment; cementing points, and all other important proposed work)

Well to be drilled to an estimated depth of 6870 feet or sufficient depth to test the Abo Reef formation. Plan to set 1870 feet of 8-5/8" OD 24# J-55 casing with 600 sx. Reg. POZ 6% Gel. and 200 sx. Reg. Nest 2% Calcium Chloride cement. After cement sets and the water is shut off, plan to drill to an estimated depth of 6870 feet and run 5-1/2" OD J-55 casing to total depth and cement with 900 sx. of Incor Poz 6% Gel. and 200 sx. Incor POZ 2% Gel. Casing protectors to be used on all drill pipe at all times.

The above described well location is more than 200 feet from the school building on the 40 acres dedicated to the well. Prior to staking the location, we met with Mr. Vernon Mills, Superintendent of Schools, Artesia, New Mexico, who has authority over the Loce Hills School, and it was agreeable for the well to be drilled at said location during the school vacation period.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
