

## NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

## NOTICE OF INTENTION TO DRILL

Notice must be given to the Oil Conservation Commission or its proper agent and approval obtained before drilling begins. If changes in the proposed plan are considered advisable, a copy of this notice showing such changes will be returned to the sender. Submit this notice in triplicate. One copy will be returned following approval. See additional instructions in Rules and Regulations of the Commission.

Fort Worth, Texas.

May 21st, 1936.

OIL CONSERVATION COMMISSION,  
Santa Fe, New Mexico

Gentlemen:

You are hereby notified that it is our intention to commence the drilling of a well to be known as

REPOLLO OIL COMPANY W.D. McINTYRE PERMIT

Well No. 1-C in NW NW

of Sec. 21, T. 17-S, R. 30-E, N. M. P. M., Jackson Field, Eddy County.

N.

The well is 330 feet [NW] [S.] of the North line and 990 feet

[E.] [NW] of the West line of NW/4 NW/4 Section 21

(Give location from section or other legal subdivision lines. Cross out wrong directions.)

If state land the oil and gas lease is No. Assignment No.

If patented land the owner is

Address

If government land the permittee is W. D. McIntyre #LC029342

Address

The lessee is

Address

We propose to drill well with drilling equipment as follows:

Rotary tools

The status of a bond for this well in conformance with Rule 39 of the General Rules and Regulations of the Commission is as follows:

We propose to use the following strings of casing and to land or cement them as indicated:

Size of Hole	Size of Casing	Weight Per Foot	New or Second Hand	Depth	Landed or Cemented	Sacks Cement
12 1/2"	10"	40#	SH	300'	Cemented	250
9-5/8"	7" OD	24#	New	2600'	Cemented-2 Stage	500

If changes in the above plan become advisable we will notify you before cementing or landing casing. We estimate that the first productive oil or gas sand should occur at a depth of about 2600 feet.

Additional information:

DUPLICATE

Approved May 23, 1936, 19  
except as follows:

In so far as the Oil Conservation Commission is concerned, as this is a government well.

OIL CONSERVATION COMMISSION,

By *[Signature]*

Title Oil & Gas Inspector

Sincerely yours,

REPOLLO OIL COMPANY

Company & Operator

By *[Signature]*

Position Land Department

Send communication regarding well to

Name Wesley G. Gish

Address P. O. Box 1990, Fort Worth, Texas

## STATE OF THE ART

The purpose of this project is to develop a new method for the analysis of the data obtained from the experiments. The main objective is to improve the accuracy of the results and to reduce the time required for the analysis. The project is divided into three main phases: data collection, data processing, and data analysis.

The first phase is data collection. This involves the collection of data from the experiments. The data is collected in the form of a table with columns for the different variables. The data is then processed and analyzed.

The second phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The third phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The fourth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The fifth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The sixth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The seventh phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The eighth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The ninth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The tenth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The eleventh phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The twelfth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The thirteenth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The fourteenth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The fifteenth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The sixteenth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The seventeenth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.

The eighteenth phase is data processing. This involves the processing of the data obtained from the experiments. The data is processed in the form of a table with columns for the different variables. The data is then analyzed.

The nineteenth phase is data analysis. This involves the analysis of the data obtained from the experiments. The data is analyzed in the form of a table with columns for the different variables. The data is then processed and analyzed.
