The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to TD of approximately 6900' with rotary equipment of Yates Drilling Company. We intend to complete this well in the Abo formation at an approximate depth of 6850'. We propose to run 1400' of 8-5/8" 24# new surface casing with cement circulated to within 100' of surface and 6900' of 4 1/2" (1000' of 11.60# & 5900' of 9.50#) new casing cemented with 200 sacks regular cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
