The elevation of the derrick floor above sea level is **3660** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

12-11-64 Halliburton acidized casing perforations from **6852'** to **6877'** with 2500 gals. 15% **NE** acid. Used 10 ball sealers. Breakdown pressure was 4000 psi. Instant SI pressure 3700 psi. 5 minute SI pressure 1300 psi and 15 minute SI pressure 200 psi. Average treating rate was 1.9 BPM. Swabbed back acid water but could not lower fluid below 4500'. Ran pump and rods and put well to pumping.

Before treatment well was making no oil and 4 bbls. water per day. Well is now making 8 bbls. oil and 130 bbls. water per day.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
