13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This Unit oil well currently is an open hole completion from 2925' to 3527'. We now propose to P&A the unitized interval in this well bore and recomplete as a Grayburg oil well. Our procedure will be to dig a 40' x 40' earthen working pit. Any accumulation in this pit will be disposed of in an approved disposal method and the pit will be back filled and leveled upon completion of this work. We will clean out well bore to TD (3527'), run GR/CCL/CNL & CBL. We will run 4 1/2" 10.50# casing from surface to TD. We will run a GR/CLL and selectively perforate sufficient holes and stimulate as recommended by stimulation companies. We will run 2 3/8" tubing and rods and test well to frac tanks until battery work is completed.

If this recompletion is successful, the well name should be changed back to the Jackson A # 10 (original name before unitization.)

14. I hereby certify that the foregoing is true and correct
