Eddy Co., N.M.

Gentlemen:

We are herewith returning one copy of your recently submitted form C-116, Gas-Oil Ratio Report, on the Jackson B 22 and 23 wells. This report is being returned so that you may correct certain errors.

First, the figures for allowable, water, oil and gas production and GOR should not be lumped together but should be reported for each well individually. Second, you will note that the volume requested in the gas production column is in MCF, or thousand cubic feet, whereas the volume requested in the GOR column is in cu. ft. per barrel, or cubic feet per barrel. Therefore, using the figures as you have reported them, I calculate a GOR of 1,866,000 to 1.

If you have any questions concerning this matter do not hesitate to call upon me.

Very truly yours,

R. L. Stamets
Geologist
