17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This is to serve as a subsequent report of liner installation and notice of intention to squeeze (re-cement) liner and recomplete for injection.

November 12, 1964 381' of 5 1/2" 14# T&C casing was ran as liner and set from 2,831' to 3,212'. Liner was cemented with 100 sx cement. Liner was perforated from 3,162' to 3,182' w/crack jets, 1 hole per ft. A 5 1/2" packer ran on 2" tubing and set at 2,858'. Well was placed on injection via 2" tubing. Water injection is channeling from liner perforations up hole to a thief zone.

Intentions are to squeeze cement the liner perforations with 300 sx cement, re-perforate premier sand at approximately 3,166' to 3,174' and continue water injection. This work is intended to correct water channeling up hole.

Instructions

General: This form is designed for submitting proposals to perform certain well operations, and reports of such operations when completed, as indicated, on Federal and Indian lands pursuant to applicable Federal law and regulations, and, if approved or accepted by any State, on all lands in such State, pursuant to applicable State law and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and practices, either are shown below or will be issued by, or may be obtained from, the local Federal and/or State office.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be described in accordance with Federal requirements. Consult local State or Federal office for specific instructions.

Item 17: Proposals to abandon a well and subsequent reports of abandonment should include such special information as is required by local Federal and/or State offices. In addition, such proposals and reports should include reasons for the abandonment; data on any former or present productive zones, or other zones with present significant fluid contents not sealed off by cement or otherwise; depths (top and bottom) and method of placement of cement plugs; mud or other material placed below, between and above plugs; amount, size, method of parting of any casing, liner or tubing pulled and the depth to top of any left in the hole; method of closing top of well; and date well site conditioned for final inspection looking to approval of the abandonment.
