## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to run sandrill tool and sandrill 4 holes 2855-2859. We will then fracture with 3,000 gallons lease oil and 7,500 lbs. sand. Well will then be put back on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
