13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This producing well was originally completed in the Grayburg-San Andres through perforations 2974'-3562' OA. Since initial completion a cement retainer was set @ 3235' & all perforations below were squeezed off. The well is now a very marginal producer through perforations 2974'-3194'.

Devon proposes to drill out inside casing & liner to the bottom of the 4 1/2" liner @ 3595', pressure test casing & liner,, selectively perforate the interval 2826'-3595' OH, acidize w/15% NEFE as needed & convert the well to water injection. This will allow a more effective & efficient flood pattern of the Grayburg-San Andres. It is anticipated the proposed work will start 3-1-95.
