

SITE SECURITY PLAN

LITTLE WING FEDERAL #1
LC-028731-~~B~~A
2180' FSL & 860' FWL
SECTION 14-T17S-R29E
EDDY COUNTY, NEW MEXICO

This Site Security Plan is in compliance with 43 CFR section 3162.7-5.

Particulars of the Site Security Plan are as follows:

1. SELF INSPECTION PROGRAM:

- A. The gas line from the well head is a closed system from the well head all the way to and beyond the gas sales meter.
- B. GPM, the gas purchaser, meters all volumes purchased from this well and reports same to the Marbob Energy Corporation production office. Also, Marbob pumpers check and record all gas volumes which pass through the sales meter and record same on a daily basis.

2. RECORDKEEPING:

The recordkeeping system described in Part 1, Items A and B, will maintain accurate records of sales volumes for a period of at least 6 years.

3. BY-PASS AROUND METERS:

Inspection of the facilities has insured that the gas meter has not been by-passed. Marbob's pumper checks the gas sales on a daily basis and would report to our production office immediately if the meter had been by-passed or tampered with.

5. SITE FACILITY DIAGRAM:

A diagram of the gas well head and other production facilities is attached to this plan and is drafted in compliance with 43 CFR s. 3162.7-5(9)(3)(d).
