13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

This producing oil well has developed a water flow between the 8 5/8" surface and 5 1/2" production casing. We dug an emergency pit to contain this 350 BPD salt water flow. This flow has now decreased to approx. 40 BPD. The PBTD is 3020' with perforations from 2793' to 3010'. We now propose to plug and abandon this well as follows:

1. Dig working pit, test anchors and MIRU, LD rods, pull tubing & set 5 1/2" CIBP @ approx. 2790' & dump 35' cement on top of CIBP. Top of cement for 5 1/2" shown as 1140'. Run freepoint and cut 5 1/2" above freepoint.
2. Pull 5 1/2" casing and set a 100' cement plug in and out of 5 1/2" cut off casing.
3. Tag top of cement plug then set an 8 5/8" cement retainer @ 430' using a wireline unit.
4. Run 2 7/8" tubing and pump suffecient cement out retainer to leave 100' in open hole.
5. A shallow small leak was patched some years ago in this 8 5/8". We propose to pull tubing out of retainer and fill 8 5/8" casing to the surface. MO rig, cover working pit, dig out flowline, remove anchors and level and restore location and install dry hole marker. Wait on BLM inspection.
