Gentlemen:

The attached C-104 is to request an emergency movement of oil produced into frac tanks at the above well site in order to prepare for an acid and frac job scheduled for 9/03/98. This new well has been on test production into the frac tank since July 16 while various ideas for a commercial completion were studied. No completion papers have been filed to dated since the final perforations and stimulations have not been completed. A copy of the required inclination report is also included.

We are faxing this paper work because of the quick action that is needed on this request but the originals have been mailed today.

We thank you for your time and consideration on this matter.

Yours truly,

James H. Arline
Materials Coordinator
