Re: Mildred Lee #1  
Unit A, 21-14-06  
Eddy County, New Mexico

Dear Sir:

To complete the filing on the above captioned well we need a change of ownership from you reflecting the assignment of rights from Socony Mobil Oil Company to Ross Brunner, also before Form 8-103 plugging report can be signed, the following work must be done on the abandoned location to meet the approval of this office. The location must be put on the dry hole marker, pits filled, tank battery location levelled, and concrete pump base removed.

Very truly yours,

OIL CONSERVATION COMMISSION

Figure 1 consists of four sub-graphs, each representing a different *E. coli* strain (1, 2, 3, and 4). The y-axis for all graphs is  $\log_{10}$  CFU/g, ranging from 0 to 10. The x-axis is time in hours, ranging from 0 to 12. Each graph shows four data series corresponding to different temperatures: 10 °C (open circles), 15 °C (open squares), 20 °C (open triangles), and 25 °C (open diamonds). In all cases, growth is faster at higher temperatures. E. coli 1 shows the most rapid growth, reaching approximately 10  $\log_{10}$  CFU/g at 25 °C within 4 hours. E. coli 2 and 3 show similar growth patterns, reaching about 8  $\log_{10}$  CFU/g at 25 °C by 8 hours. E. coli 4 shows the slowest growth, reaching about 6  $\log_{10}$  CFU/g at 25 °C by 12 hours.
