the  $\beta$  phase of the polymer. The  $\beta$  phase is the more ordered phase and is characterized by a higher density and a higher melting point than the  $\alpha$  phase. The  $\beta$  phase is the more stable phase and is the one that is observed in the pure polymer. The  $\alpha$  phase is the less stable phase and is the one that is observed in the polymer blend. The  $\alpha$  phase is the one that is observed in the polymer blend because it is the one that is more compatible with the other polymer in the blend.
