Address

THEORY OF THE EARTH

CHAPTER I. OF THE ORIGIN OF THE EARTH.

SECTION I. OF THE ORIGIN OF THE EARTH.

THE EARTH, as we see it, is a globe, and is composed of various materials, which are arranged in different layers, or strata, and are called rocks. The rocks are of three kinds, viz. primary, secondary, and tertiary. The primary rocks are those which are the oldest, and are composed of igneous, sedimentary, and metamorphic materials. The secondary rocks are those which are formed from the primary rocks, and are composed of igneous, sedimentary, and metamorphic materials. The tertiary rocks are those which are formed from the secondary rocks, and are composed of igneous, sedimentary, and metamorphic materials.
