

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

NOTICE OF INTENTION TO DRILL

Notice must be given to the Oil Conservation Commission or its proper agent and approval obtained before drilling begins. If changes in the proposed plan are considered advisable a copy of this notice showing such changes will be returned to the sender. Submit this notice in triplicate. One copy will be returned following approval. See additional instructions in Rules and Regulations of the Commission.

OIL CONSERVATION COMMISSION.
Santa Fe, New Mexico.

Gentlemen:

You are hereby notified that it is our intention to commence the drilling of a well to be known as Brainard & Guy Well No. 1 in NEWME

Company or Operator Lease
of Sec. 2, T. 18, R. 27, N. M. P. M., Artesia Field, Eddy County
N.

The well is 330 feet (X) (S.) of the E line and 990 feet
(E) (W.) of the E line of Section 2
(Give location from section or other legal subdivision lines. Cross out wrong directions)

If state land the oil and gas lease is No. B-9299, Assignment No. _____

If patented land the owner is _____

Address _____

If government land the permittee is _____

Address _____

The lessee is Fred Brainard

Address Box 145 Artesia N.M.

We propose to drill well with drilling equipment as follows: _____

AREA 640 ACRES

LOCATE WELL CORRECTLY

No. 2 National Drilling Rig

The status of a bond for this well in conformance with Rule 39 of the General Rules and Regulations of the Commission is as follows: \$2500.00 Surety Bond (Attached)

We propose to use the following strings of casing and to land or cement them as indicated:

Size of Hole	Size of Casing	Weight Per Foot	New or Second Hand	Depth	Landed or Cemented	Sacks Cement
<u>12 1/2</u>	<u>10</u>	<u>40</u>	<u>SH</u>	<u>375-400</u>	<u>landed</u>	
<u>10</u>	<u>8 5/8</u>	<u>28</u>	<u>SH</u>	<u>850-900</u>	<u>landed</u>	

This casing record would necessarily be altered somewhat if 500 ft. production is obtained as I would want to cement the 10" string. Also would run 7" oil string, cemented, if below 1400 ft.

If changes in the above plan become advisable we will notify you before cementing or landing casing. We estimate that the first productive oil and gas sand should occur at a depth of about 450 feet.

Additional information:

If well is deepened below 1500 ft. for production will submit new bond for \$5000.00 and new schedule for casing and cementing

OCT 20 1941

Approved _____, 19____
except as follows:

Sincerely yours,

Brainard & Guy

OIL & GAS INSPECTOR

NOTICE OF INTENTION TO DRILL

It is requested that you advise the Commission of the results of your efforts to obtain the necessary approvals for the proposed project. The Commission will be pleased to receive a copy of the report of the Commission of the results of your efforts to obtain the necessary approvals for the proposed project. The Commission will be pleased to receive a copy of the report of the Commission of the results of your efforts to obtain the necessary approvals for the proposed project.

Figure 1. The effect of the concentration of the H_2O_2 solution on the amount of the released H_2O from the H_2O_2 -loaded hydrogel. The amount of the released H_2O was measured by the weight difference of the hydrogel before and after the release. The concentration of the H_2O_2 solution was 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, and 1.0 wt. %.

[illegible]

1. The first of these is the fact that the Commission has not yet received any information from the Government of the Republic of China (Taiwan) regarding the situation in the Republic of China (Taiwan) since the end of the Second World War. This is a serious omission, as the Commission is required to provide a comprehensive report on the situation in the Republic of China (Taiwan) to the United Nations. The Commission is therefore unable to provide a complete and accurate report on the situation in the Republic of China (Taiwan) to the United Nations.

1. The first part of the document is a list of names and their corresponding dates. The names are: "John Doe", "Jane Smith", "Bob Johnson", "Alice Brown", "Charlie White", "David Green", "Eve Black", "Frank Gray", "Grace Hall", "Henry Lee", "Ivy King", "Jack Long", "Karen Miller", "Leo Nelson", "Mia Parker", "Noah Quinn", "Olivia Reed", "Peter Scott", "Quinn Taylor", "Rachel Turner", "Samuel Vance", "Tina Wright", "Uma Young", "Victor Zane". 1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. The first step in the process of the investigation is to identify the problem. This is done by the investigator who is assigned to the case. The investigator will then gather information about the problem and the people involved. This information will be used to determine the cause of the problem and to develop a plan to solve it.

10. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Lichtenthaler and Sponholz (1974). The total chlorophyll content was determined by the method of Arar and Cook (1980). The carotenoid content was determined by the method of Lichtenthaler and Sponholz (1974). The total phenolic content was determined by the method of Singleton and Rossi (1965). The total flavonoid content was determined by the method of Zhishen et al. (1999). The total protein content was determined by the method of Lowry et al. (1951). The total lipid content was determined by the method of Folch et al. (1957). The total carbohydrate content was determined by the method of Dubois and Gilles (1950). The total ash content was determined by the method of AOAC (1990). The total acid content was determined by the method of AOAC (1990). The total base content was determined by the method of AOAC (1990). The total nitrogen content was determined by the method of Kjeldahl (1900). The total phosphorus content was determined by the method of Molybdenum blue (1900). The total potassium content was determined by the method of Flame photometry (1900). The total calcium content was determined by the method of Atomic absorption spectrometry (1900). The total magnesium content was determined by the method of Atomic absorption spectrometry (1900). The total iron content was determined by the method of Atomic absorption spectrometry (1900). The total zinc content was determined by the method of Atomic absorption spectrometry (1900). The total copper content was determined by the method of Atomic absorption spectrometry (1900). The total manganese content was determined by the method of Atomic absorption spectrometry (1900). The total selenium content was determined by the method of Atomic absorption spectrometry (1900). The total iodine content was determined by the method of Atomic absorption spectrometry (1900). The total bromine content was determined by the method of Atomic absorption spectrometry (1900). The total chlorine content was determined by the method of Atomic absorption spectrometry (1900). The total sulfur content was determined by the method of Atomic absorption spectrometry (1900). The total oxygen content was determined by the method of Atomic absorption spectrometry (1900). The total hydrogen content was determined by the method of Atomic absorption spectrometry (1900). The total carbon content was determined by the method of Atomic absorption spectrometry (1900). The total nitrogen content was determined by the method of Atomic absorption spectrometry (1900). The total phosphorus content was determined by the method of Atomic absorption spectrometry (1900). The total potassium content was determined by the method of Atomic absorption spectrometry (1900). The total calcium content was determined by the method of Atomic absorption spectrometry (1900). The total magnesium content was determined by the method of Atomic absorption spectrometry (1900). The total iron content was determined by the method of Atomic absorption spectrometry (1900). The total zinc content was determined by the method of Atomic absorption spectrometry (1900). The total copper content was determined by the method of Atomic absorption spectrometry (1900). The total manganese content was determined by the method of Atomic absorption spectrometry (1900). The total selenium content was determined by the method of Atomic absorption spectrometry (1900). The total iodine content was determined by the method of Atomic absorption spectrometry (1900). The total bromine content was determined by the method of Atomic absorption spectrometry (1900). The total chlorine content was determined by the method of Atomic absorption spectrometry (1900). The total sulfur content was determined by the method of Atomic absorption spectrometry (1900). The total oxygen content was determined by the method of Atomic absorption spectrometry (1900). The total hydrogen content was determined by the method of Atomic absorption spectrometry (1900). The total carbon content was determined by the method of Atomic absorption spectrometry (1900).
