RED LAKE

KIDLY

NEW MEXICO.

(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is 3410 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill and test the San Andres at approximately 1250'.

We plan to run about 1250' of 20# 7" casing; cement to surface; drill down to approximately 1900', setting 4-1/2" casing and tie the two strings together with cement. This well is in the Water Board district and we will comply with their regulations and notify them when any cementing is done.

This hole will be drilled with rotary to approximately 1250' and cable tools to total depth. Contractor is Harvey Yates, Artesia, New Mexico.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
