Detailed account of work done, nature and quantity of materials used and results obtained.

We did the following work on the well:

We cleaned out to approximately 1770'; drilled up packer and junk; ran 1750' of 4-1/2" - 9-1/2# seamless casing. This was cemented with 210 sacks cement and this cement circulated to surface. We let set 72 hours and perforated 4-1/2" casing from 1602-1622'.

We sand fracked, first using 250 gallons of acid and then 19,000# of fine sand and 5,000# of coarse sand, using approximately 650 barrels of oil.

We have recovered all lead oil and the well is now making approximately 55 barrels per day.
