THE ELEVATION OF THE DERRICK FLOOR ABOVE SEA LEVEL IS 3521 FT.

DETAILS OF WORK

(STATE NAMES OF AND EXPECTED DEPTHS TO OBJECTIVE SANDS; SHOW SIZES, WEIGHTS, AND LENGTHS OF PROPOSED CASINGS; INDICATE MUDGING JOBS, CEMENTING POINTS, AND ALL OTHER IMPORTANT PROPOSED WORK.)

It is planned to dually complete the present Bend gas zone in subject well with the Abo Oil Zone. The work will consist of opening an additional Bend interval from 9448-9450 feet and stimulating the Bend completion with a 20,000 gallon gelled slick water frac treatment. Following this, the Abo from 5340-5353 feet will be perforated, then acidized with 20,000 gallons. Production equipment will include packers above and below the Abo oil zone and a cross-over assembly for Bend gas flow through the annulus and Abo oil flow through the single tubing string. The above work is similar to that performed on Chalk Bluff Draw Unit 4-P (formerly C-1) in April 1961. The procedure was discussed with Mr. Knauf in a November 22, 1961 telephone conversation.

I UNDERSTAND THAT THIS PLAN OF WORK MUST RECEIVE APPROVAL IN WRITING BY THE GEOLOGICAL SURVEY BEFORE OPERATIONS MAY BE COMMENCED.
